Flower Arranging Tips from That Flower Feeling

1) Start with clean tools
   - Use a clean vase and sharp clippers or scissors.
   - Wash vases with soap and hot water to help flowers last longer.

2) Prep your stems
   - Remove leaves that would sit below the water line to prevent bacteria.
   - Cut stems at an angle under running water or in a bowl of water to improve uptake.

3) Build a strong base
   - Begin with greenery to create shape and structure in the vase.
   - Crisscross stems to form a grid that supports your focal flowers.

4) Use a simple formula
   - Choose 1–2 focal flowers (like roses or lilies), 1 filler flower (like spray roses, waxflower), and greenery.
   - Stick to a limited color palette (2–3 colors) for a cohesive look.

5) Mind proportions
   - Aim for an arrangement that is roughly 1.5 times the height of the vase.
   - Place taller stems in the center or back, shorter stems toward the edges.

6) Create movement and depth
   - Vary stem heights slightly so the design feels natural, not rigid.
   - Angle some flowers outward and some inward to add dimension.

7) Rotate as you design
   - Turn the vase as you arrange so it looks good from every angle.
   - Step back periodically to check the overall balance and shape.

8) Water and care
   - Use flower food if you have it and follow the packet directions.
   - Change the water, recut stems, and remove wilted blooms every 2–3 days.

Enjoy the process—there's no 'wrong' way to arrange flowers. Let your style shine through each arrangement!
